

Kurti Fabric-to-Image Visualization Prompt — Round Neck / Sleeveless / A-Line / Calf Length

PRIME DIRECTIVE: The uploaded fabric image is the sole source of truth for color, print, motif, scale, and texture. Everything else in this prompt is secondary to fabric fidelity.

Create a high-quality, photorealistic fashion product visualization of a women's kurti using the provided fabric image as the exact fabric/material reference.

GARMENT SPECIFICATION

- Garment type: kurti
- Silhouette: A-line
- Neckline: round neck
- Sleeve type: sleeveless
- Sleeve length: N/A (sleeveless)
- Garment length: calf length
- Fit: regular fit (fitted through bust and shoulders, gentle flare from waist)
- Hemline: straight hem
- Front style: plain front, no placket
- Side slits: none

If any field above is left blank, apply standard, tasteful defaults consistent with contemporary Indian ethnic wear.

FABRIC REFERENCE

Use the uploaded fabric image as the primary and authoritative reference for the fabric:

- Preserve the fabric's original color as faithfully as possible. Do not reinterpret, beautify, brighten, darken, desaturate, or recolor it.
- Original print/pattern
- Motifs and their visual characteristics
- Pattern scale and density
- Texture and weave appearance
- Material characteristics
- Overall visual identity of the fabric

The fabric pattern must be naturally wrapped and mapped onto the generated garment. Do not redesign, simplify, replace, recolor, or invent a different textile pattern.

If the uploaded fabric contains a repeating pattern, intelligently repeat it across the garment while maintaining realistic scale, orientation, and continuity.

GARMENT CONSTRUCTION

Construct the garment accurately according to the specified attributes. The generated garment must have:

- Realistic seams and stitching
- Natural fabric folds and wrinkles, consistent with the fabric's apparent weight and stiffness
- Physically plausible draping
- Correct sleeve construction
- Correct neckline construction
- Realistic garment proportions
- Natural interaction between fabric and body
- Clean and believable hemline
- Consistent fabric behavior throughout the garment

Do not introduce design elements that were not specified.

MODEL / PRESENTATION

Present the garment on a professional fashion model with a natural, elegant pose.

- Model: adult woman, average build, neutral professional expression
- Framing: full-body (garment is calf length)
- Natural body proportions
- Minimal accessories, minimal makeup
- Clean hairstyle that does not obscure the garment
- The garment must remain the primary visual focus

CAMERA & OUTPUT

- Angle: eye-level, model facing camera straight-on or at a slight 3/4 turn
- Lens: 85mm fashion lens, f/4, sharp focus on garment
- Distance: garment fully framed within shot, centered, with consistent margin top and bottom
- Aspect ratio: 4:5
- Resolution: high-resolution commercial fashion catalog quality

BACKGROUND

- Background: seamless studio backdrop, pure white ()
- Lighting: soft studio softbox lighting from front, 45° key light angle, minimal harsh shadow falloff
- Subtle natural contact shadow beneath the model only — no distracting props, textures, or set elements

PHOTOREALISM

Generate a highly realistic commercial fashion photograph. Ensure:

- Accurate fabric texture and high-detail textile rendering
- Realistic skin and anatomy
- Natural lighting and realistic shadows
- Accurate garment geometry
- Natural folds and draping
- Sharp garment details
- Professional fashion photography quality

IMPORTANT CONSTRAINTS

The output must represent the same fabric transformed into the specified garment design.

Do NOT:

- Change the fabric color
- Replace the fabric pattern or invent a different print
- Distort the fabric pattern
- Add embroidery, jewelry, or accessories unless explicitly requested
- Change the specified neckline, sleeve style, silhouette, or length
- Add a dupatta or extra garments unless requested
- Produce unrealistic folds
- Generate text, logos, watermarks, labels, or UI elements
- Generate anatomical distortion — no extra or missing fingers, no warped limbs, no asymmetric facial features

OUTPUT

Generate one complete, photorealistic kurti product visualization suitable for an online fashion catalog. The final image should look like a professionally photographed garment made from the uploaded fabric, not an illustration or digitally painted design.
